Development environments	Visual Studio Code, PHP Storm, Sublime, Eclipse, Visual Studio, NetBeans, MySQL Workbench
Networking	SOAP, HTTP, FTP, SFTP

EMPLOYMENT**Front-end Developer****Nationwide Appraisal Services****Mar. 2017 – Mar. 2020***Created:*

- Built all the company's WordPress brochure websites from scratch: [ConnexionSoftware](#), [Nationwide Recovery Services](#);
- Implemented internationalization and set up Google Analytics on the sites;
- Created a flat-file CMS (Grav) version of a brochure website as an easier version of WordPress-based sites;
- Designed and implemented UI for the new NAS Mobile App using Webpack and SASS pre-compiler;
- Designed icons and logos for projects (the HTML-based Adobe Forms, RELNX);
- Designed and implemented info-graphics for marketing websites and mobile app ([e.g.](#));
- Designed for printed matter (flyers);

Modernized:

- Added new features to the PHP project (CNX) using VueJS with Webpack and the SASS precompiler;
- Designed and implemented new UI/UX for VueJS applications (CNX Onboarding site);
- Improved websites' UX by designing and implementing interactivity;
- Improved the workflow on the maintenance of the static brochure websites by transitioning them from sftp to a version control system (Git);
- Created deployment environments (Local, Staging, Production);
- Enabled the progress of multiple Jira tickets without blocking each other;
- Implemented the Responsive Web Design on the multiple websites that lacked it;

- Modernized the UI for a major PHP project (CNX);
- Designed and implemented new layout for email templates;
- Analyzed legacy code, took steps to modernize it by cleaning out unused JavaScript libraries;
- Designed UX and UI and implemented HTML mockups for landing pages;
- Designed UX/UI and implemented html mockups for the Online Help website based on the MadCap Flare (the technical writing tool);

Managed:

- Oversaw all the front-end needs of the company's websites as the only frontend developer;
- Was involved in 23 projects built on Java, PHP, .NET, VueJS, as well as static websites;
- Performed the combined duties of a project manager and developer on marketing projects: determining the scope of work, making decisions about tools to use, prioritizing, creating necessary Jira tickets and sub-tasks;
- Managed time efficiently which allowed for multitasking and switching from project to project several times a day;
- Conducted teaching sessions on Git to co-workers;
- Composed instructions on how to transfer MadCap projects to server;
- Devised suitable strategies for cooperation with remote team-member on the project workflows;
- Conducted presentations explaining technical difficulties efficiently to non-technical management members to help make decision about company-wide issues;

Enhanced:

- Accelerated the Jira tickets' turnaround from days to minutes;
- Automated and enhanced the development workflow on projects by introducing gulp and the SASS preprocessor;
- Improved the workflow of the marketing tickets by introducing a Google-based copy deck;
- Helped non-technical marketing co-workers with internet terminology;
- Maintained and improved the company's Adobe LiveCycle project;

Team Player:

- Joined another development team, took a training seminar, and assisted with urgent tasks during critical times;
- Earned the worker of the month prize;
